Abstract

A fastener for holding down a rail on a sleeper comprising a body having two toe members(TM) adopted for exerting symmetrical pressure on the foot of a rail (R), four curved members, forming two toe anchor links (TAL) and two toe heel links (THL); two central anchoring means (CAM) adopted to snap shut into a central eye (IE) provided in the insert of the rail sleeper, and a single heel member (HM), each such fastener being provided on either side of the rail, resulting in four toe members holding down the rail to the sleeper.
