(57) Abstract : A stirring device for beverages comprises of a stirring body having at one end squeezing means for squeezing out infusion bags in a post stirring configuration. The squeezing means includes holding means such as a groove or slit for holding the string of a tea bag provided at one end on the stirrer body. The device includes at least one holder for substance to be added to a beverage, each holder consisting of a reservoir in which granular material is located, whereby a wall of the reservoir is removable or provided with perforations to provide liquid with access to the granular material.
